Audience	Marketing, strategy, and management leads validating an overseas launch with Market Twin

Revision history

Version	Date	Notes
v1.0	2026-06	Initial release

1. Introduction

1.1 Overview

Market Twin is a SaaS that lets you **validate an overseas launch with a simulation — before** you ship. AI personas, modeled on government statistics for each candidate country's local consumers, react to your product, price, and creative.

Where traditional market research takes weeks to months and costs tens of thousands of dollars, Market Twin delivers the following **in just 5-6 minutes**:

- Which country to enter first (recommended markets)
- How local consumers react to your product and price
- What the right price is
- What the risks and go-to-market strategy are

1.2 Core Value

Value	Description
Launch success score	0–100 score based on demand, CAC, and competitive intensity
Multi-country comparison	Objective comparison grounded in government statistics (KOSIS, BLS, e-Stat)
AI persona simulation	Precise analysis down to occupation, income band, and purchase intent
Regulatory pre-check	Markets where the product can't legally be sold are excluded automatically

1.3 Who It's For

Founders, marketing/strategy leads, export managers at SMEs and startups preparing to go global, plus accelerators and investors. Designed so that **non-technical users** can run it with 5 minutes of input.

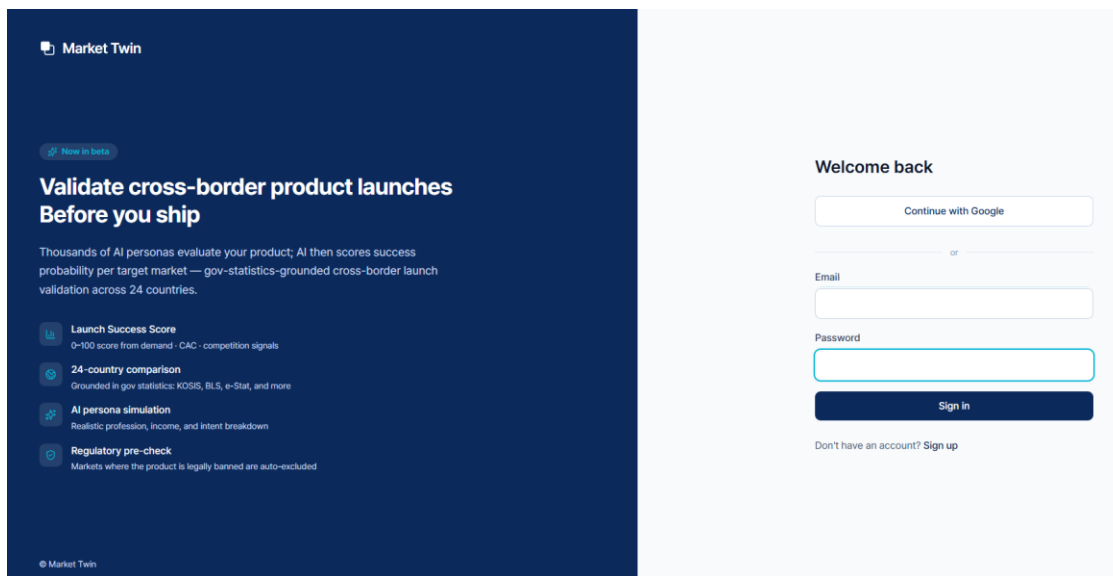

1.4 Requirements

- **Access:** Web browser (latest Chrome, Edge, or Safari recommended); no installation
- **URL:** `app.markettwin.ai`
- **Languages:** Korean / English (switch in Settings)

2. Getting Started

2.1 Access & Sign-up

1. Go to **app.markettwin.ai** in your browser.
2. Choose a sign-up method on the login screen.
 - **Continue with Google:** instant sign-up/login with a Google account
 - **Email/password:** enter an email and a password (8+ characters)
3. Agree to the Terms, Privacy Policy, and cross-border transfer notice (required) to finish.

Login / product intro screen

2.2 Email Verification

If you signed up by email, **email verification** is required for security.

1. Right after sign-up, a “Verify your email” screen appears.
2. Click the link in the **verification email** sent from noreply@markettwin.ai.
3. Once verified, you’re logged in automatically.

No verification email? ① Check your spam folder, then ② click **“Resend confirmation email”** on the login/sign-up screen (60-second interval). If it still doesn’t arrive, contact contact@markettwin.ai.

2.3 Login

- Log in with the method you signed up with (Google or email).

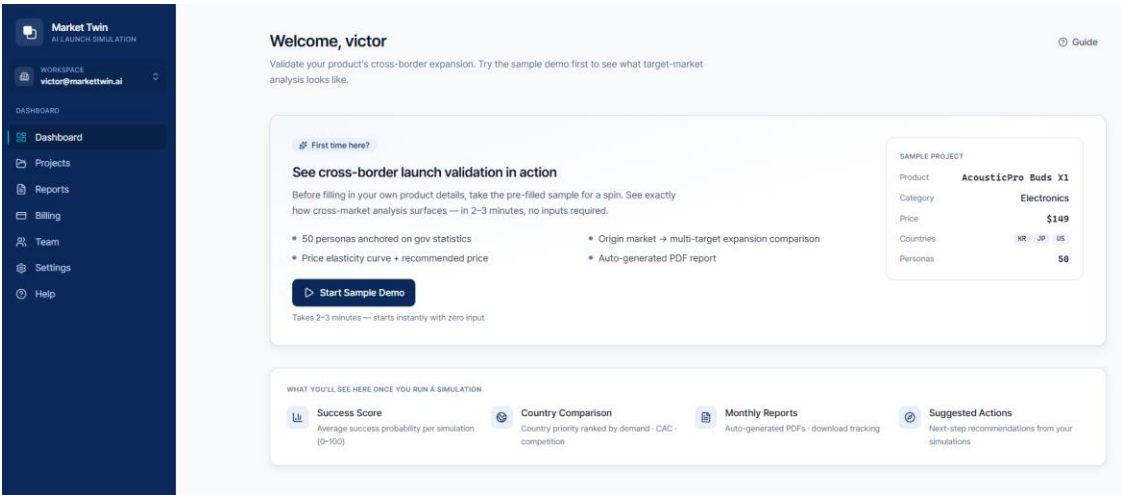

- If you try to log in while unverified, you'll see a prompt with a **“Resend confirmation email”** button.

3. Dashboard

After login, the Dashboard is your home screen. The left navigation (Dashboard · Projects · Reports · Billing · Team · Settings · Help) gives access to every feature.

3.1 First Sign-up — Sample Demo

On first sign-up, the dashboard shows a **sample demo card**. With a pre-filled K-product sample, click **Start sample demo** — no input needed — to see what an overseas-market analysis looks like in 2–3 minutes (3 per day, separate from your validation runs).

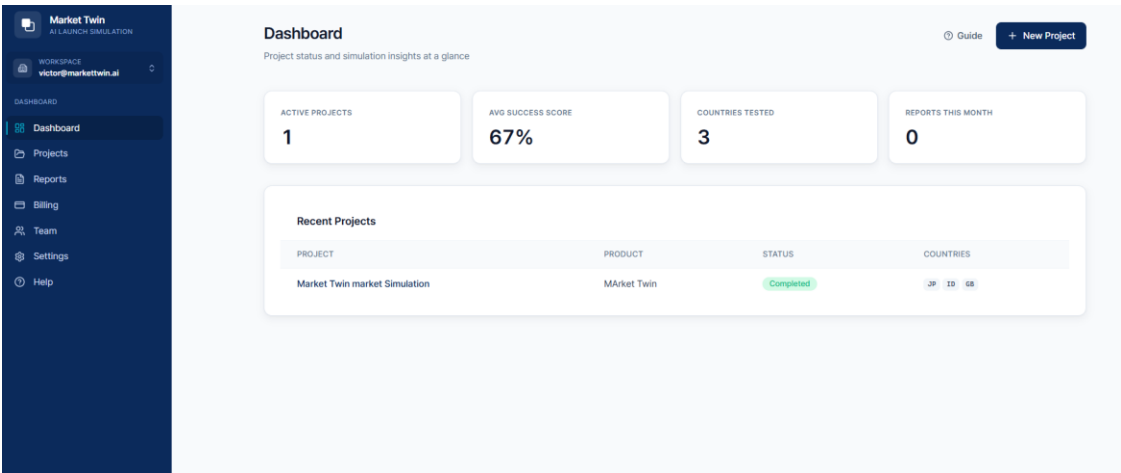

Dashboard — first-time user (sample demo)

3.2 Metric Cards (after running a simulation)

Once you run a simulation, the dashboard shows metric cards and a recent-projects list at the top.

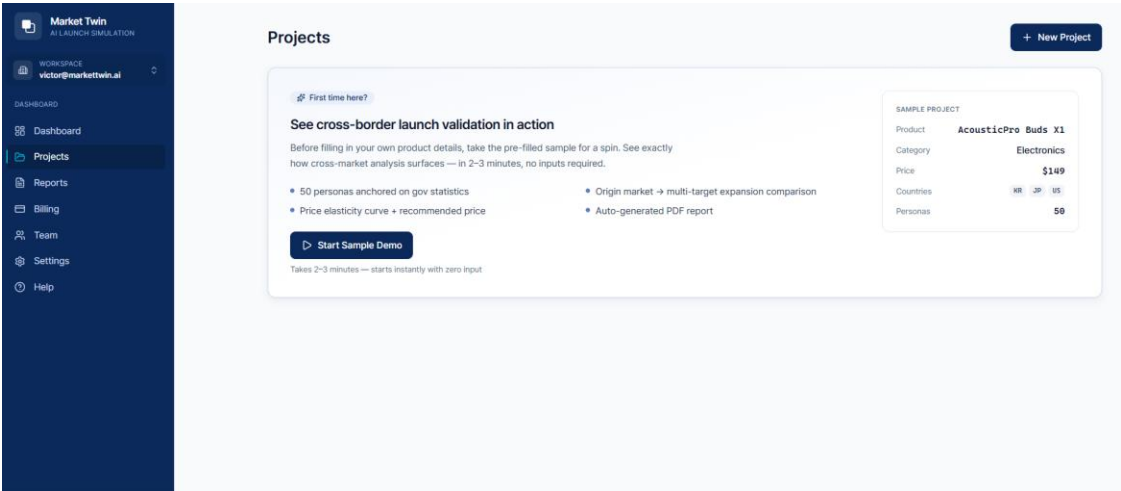

Card	Meaning
Active projects	Number of projects currently running
Avg. success score	Average launch success score of completed simulations (0–100)
Countries tested	Number of countries used in analysis
Reports this month	Reports generated this month

Dashboard — activity overview

3.3 Starting a New Project

To validate a real product, go to **Projects** in the left menu and click **+ New Project** at the top right (see Chapter 4). After you run the sample demo once, **+ New Project** also appears at the top right of the dashboard.

Projects screen — + New Project

4. Creating a Project (6-step wizard)

Enter your product over six steps. The progress bar at the top (**1 Product** → **2 Price & Goal** → **3 Target Markets** → **4 Competitors** → **5 Creative** → **6 Review & Run**) shows where you are.

New project — start screen (template selection)

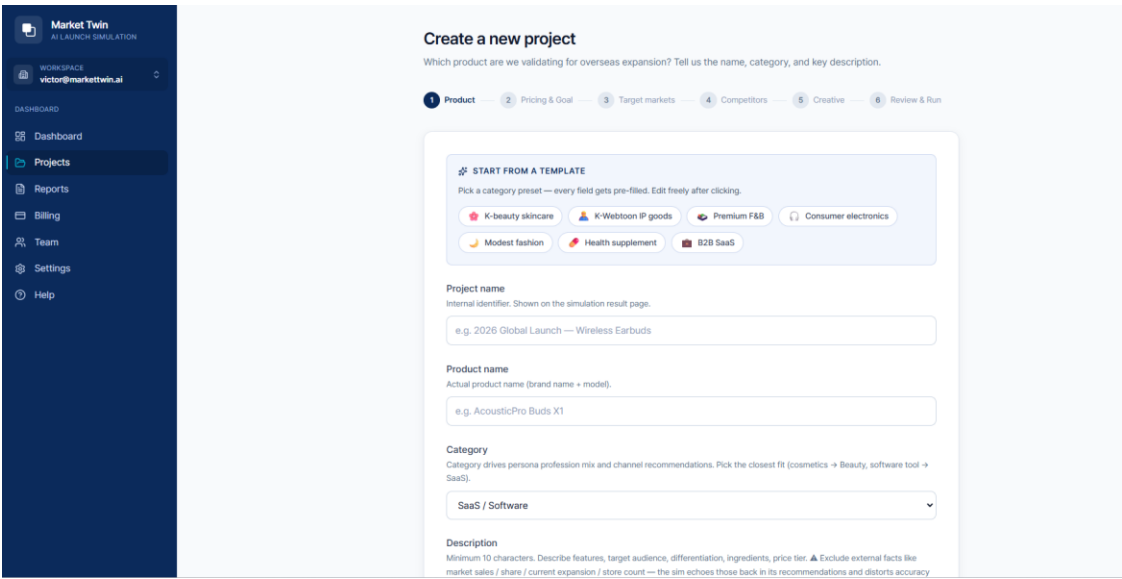

Tip — start from a template: Click a category preset at the top (K-beauty skincare / K-webtoon IP goods / premium food & beverage / premium appliance / modest fashion / health supplement / B2B SaaS) to auto-fill every field with an example. Edit freely afterward.

4.1 Step 1 — Product

Field	Description
Project name	Internal label. Shown on the results page.
Product name	Actual brand/model name
Category	Affects persona occupation distribution and channel recommendations. Pick the closest match.
Description	10+ characters. Freely write features, target, differentiators, ingredients, price range.

Caution — leave out external facts. Do not enter market figures like “40% of sales in the US” (sales share, market position, current presence). The simulation takes them at face value and skews accuracy (e.g. “40% US sales” → it auto-

recommends the US). Describe **only the product itself** for a more reliable market recommendation.

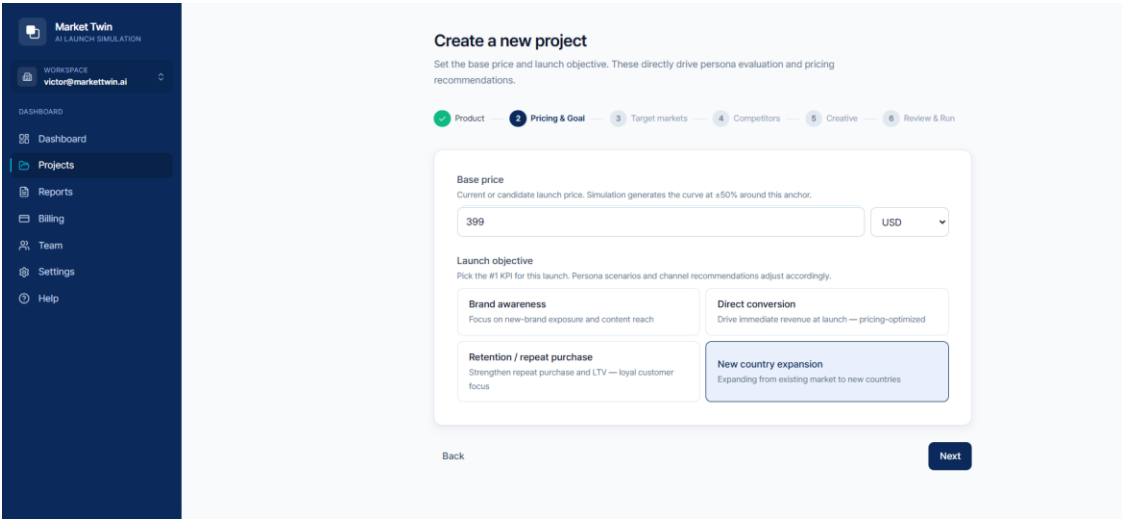

Step 1 — product details

4.2 Step 2 — Price & Goal

Field	Description
Base price + currency	Your current or candidate launch price. The simulation builds a price curve across a ±50% range .
Launch goal	Pick the top-priority KPI for this launch. It changes persona scenarios and channel recommendations.

Four launch goals

- **Brand awareness** — new-brand exposure and content reach
- **Instant sales conversion** — immediate revenue at launch, price optimization first
- **Repeat & retention** — repeat purchase / LTV, loyal-customer focus
- **New-market entry** — expanding from an existing market to new countries

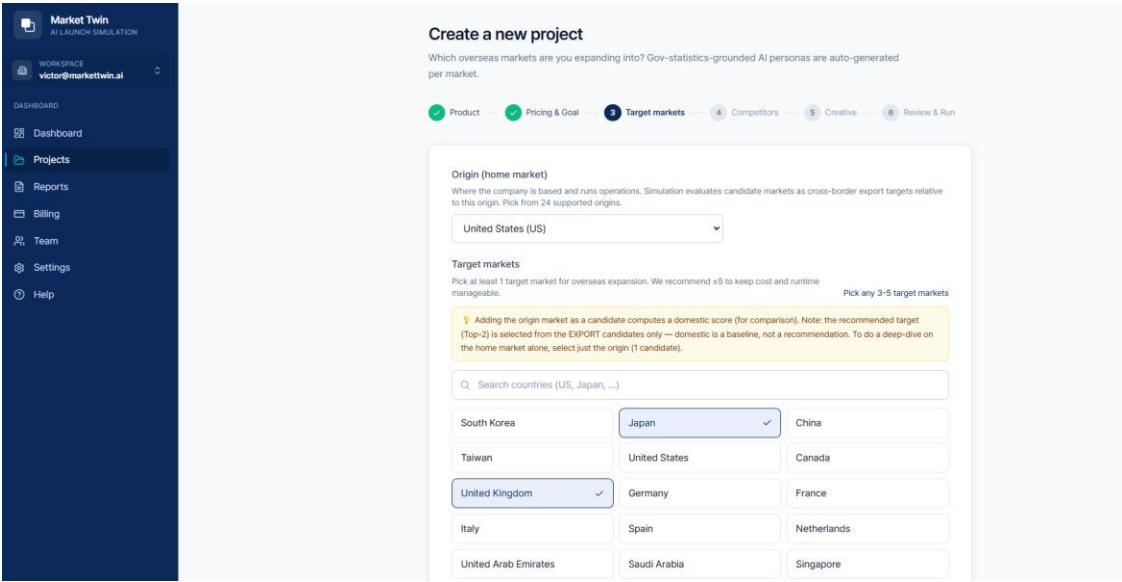

Step 2 — price & goal

4.3 Step 3 — Target Markets

Field	Description
Origin country	The home country your company launches/operates from. The simulation evaluates candidate markets relative to it. Default: South Korea.
Candidate markets	Pick one or more overseas markets to validate. Given cost/time, ~5 is recommended (24+ countries supported).

Adding your origin country to the candidates also yields a domestic score (for comparison with overseas options). However, the “Top-2 recommended markets” are chosen only from overseas candidates.

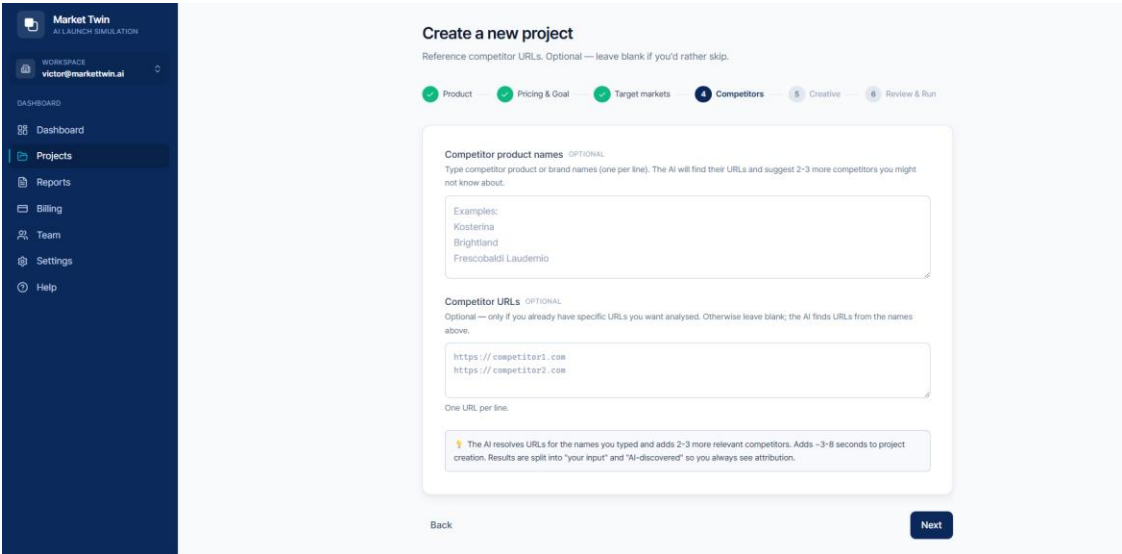

Step 3 — target market selection

4.4 Step 4 — Competitors (optional)

Field	Description
Competitor product/brand names	One per line. AI finds URLs and discovers 2–3 competitors you may have missed.
Competitor URLs	Only when you want a specific URL included. Leave blank and AI finds URLs from the names above.

The results screen distinguishes “what you entered” from “what AI discovered.” Competitor discovery adds 3–8 seconds to project creation.

Step 4 — competitors

4.5 Step 5 — Creative (optional)

Field	Description
Creative concept	One per line, rough description, of concepts you'd run (or are considering). The results show a 0–100 score + per-market strengths/weaknesses per concept.
Mockup image upload	Upload a mockup (JPG/PNG/WebP/GIF, ≤4MB each). Vision-AI reads the actual visual for more accurate analysis.
Image URLs	Paste already-hosted public URLs, one per line, for the same effect.

Create a new project

Test ad concepts before producing them. Describe each idea in plain text — AI personas evaluate fit per market and surface specific strengths and weaknesses, so you know which to greenlight.

Product Pricing & Goal Target markets Competitors **5 Creative** 6 Review & Run

Creative concepts OPTIONAL
What you'd run as ads (or are considering). One concept per line — rough descriptions are fine, finished visuals not required. Each gets a 0-100 fit score plus market-specific strengths and weaknesses in your results.

Examples:
Hero video — morning routine concept
Instagram carousel — minimalist still life
3-min demo video — user testimonial interviews

Upload mockup images (optional) OPTIONAL
Drop mockup images here if you have them. Vision-AI inspects each visual to sharpen the analysis. Either this or URLs below — pick whichever is easier; both work equally.

Click to choose mockup images (or drag in)
JPG / PNG / WebP / GIF · up to 4 MB each

Or paste image URLs (optional) OPTIONAL
Already-hosted CDN / Imgur / Drive URLs (one per line). Identical effect to uploading the file directly. Skip if you uploaded above. URLs must be publicly accessible.

https://images.example.com/hero.jpg
https://cdn.example.com/banner.png

Step 5 — creative

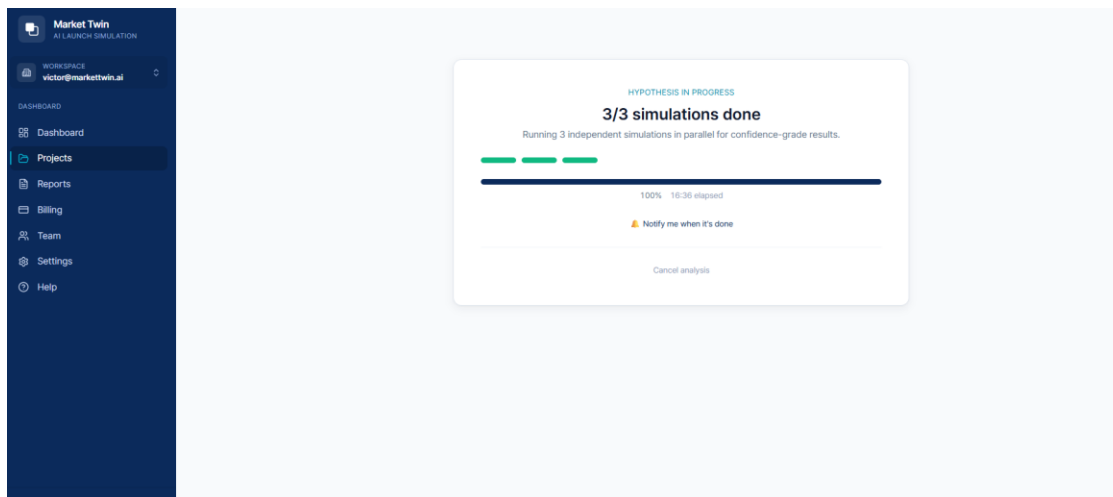

4.6 Step 6 — Review & Run

Review the inputs and **Run**. Depending on the tier you chose, 600–10,000 AI personas start simulating across multiple LLMs.

5. Running the Simulation

When you run it, a progress screen appears. Multiple independent simulations run **in parallel** to produce a reliable result (the ensemble approach).

- Progress and completed-sim counts update in real time.
- Turn on **browser notification on completion** to be alerted while doing other work.
- You can close the screen — the simulation keeps running, and you'll find results on the results page when done.
- Time: the sample demo takes 2–3 minutes; a real product validation usually 5-6 minutes.

Simulation in progress / complete

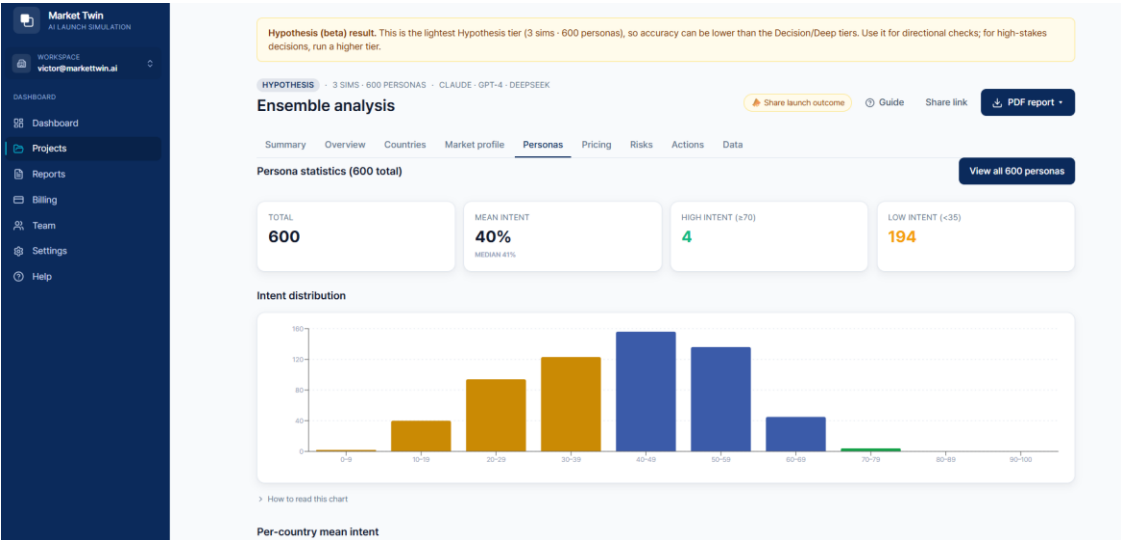

6. Reading Results

The top of the results screen shows the tier, sim count, persona count, and LLMs used (e.g. **Decision Plus · 15 sims · 3,000 personas · CLAUDE·GPT-4·DEEPSEEK**), with results across **10 tabs** below.

Tab	Content
Summary	Consensus narrative merging all sims
Overview	Key metrics summary
Countries	Per-country score and vote share
Market Analysis	Market size (TAM), growth trend, reachable segment, competitor analysis
Personas	Persona stats, purchase-intent distribution, positive/negative voices, age/occupation distribution
Pricing	Recommended price vs. your input, revenue index
Decision	Investment required, CAC, ROI, break-even
Risk	Overall risk level, individual risks
Actions	Impact × difficulty priority matrix
Data	Raw data

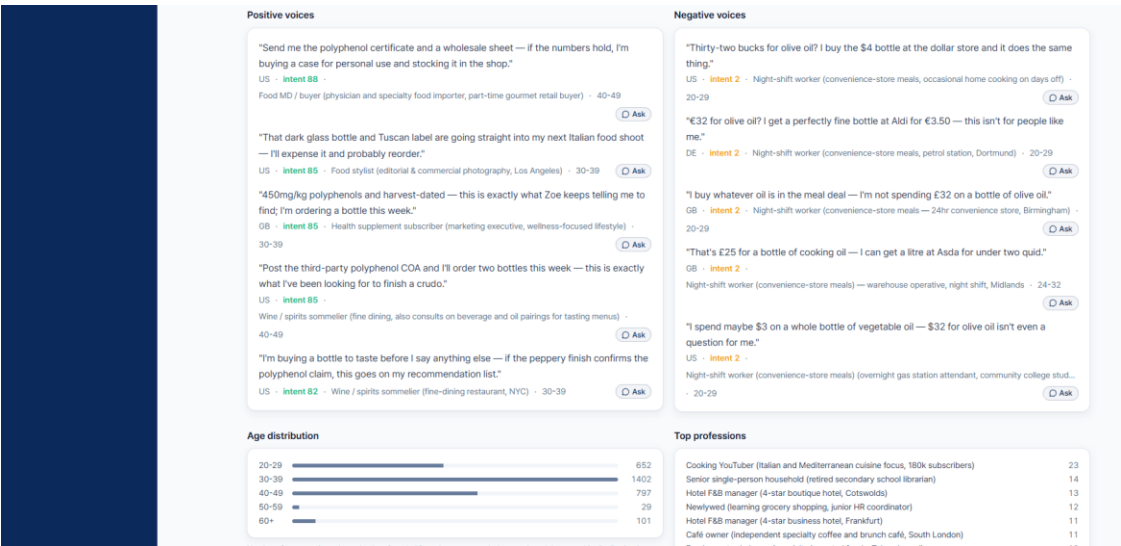

6.1 Personas Tab

Persona stats (total personas, average purchase intent, strong interest ≥70, weak interest <35), a purchase-intent histogram, average intent by country, and age/occupation distribution (Top 12).

Results — persona stats & distribution

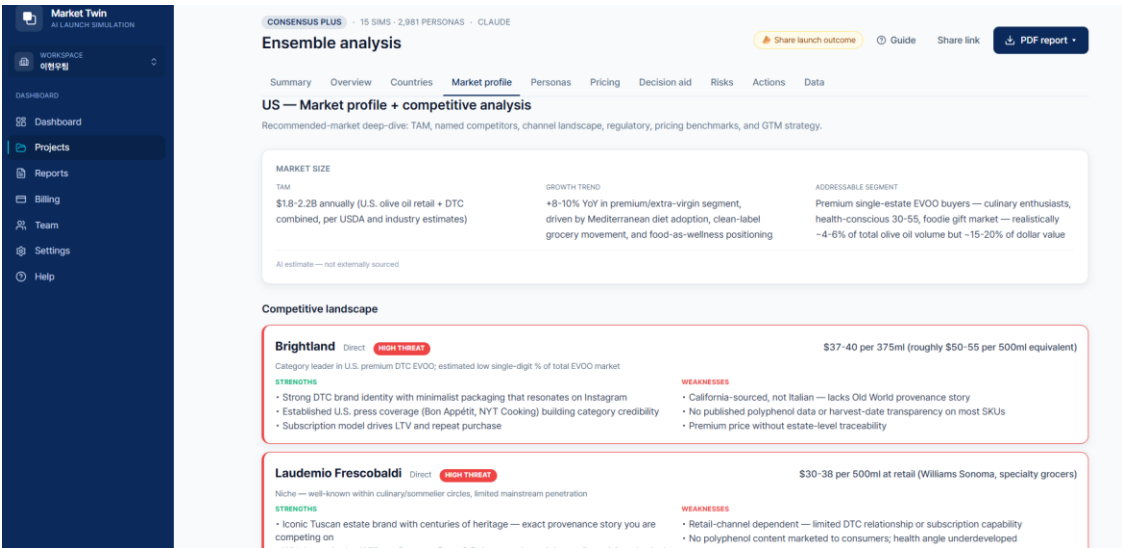

At the bottom, the **positive personas’ voices** and **negative personas’ voices** appear with first-person quotes and profiles (country, intent score, occupation, age). You can read directly what attracts real consumers and what makes them hesitate.

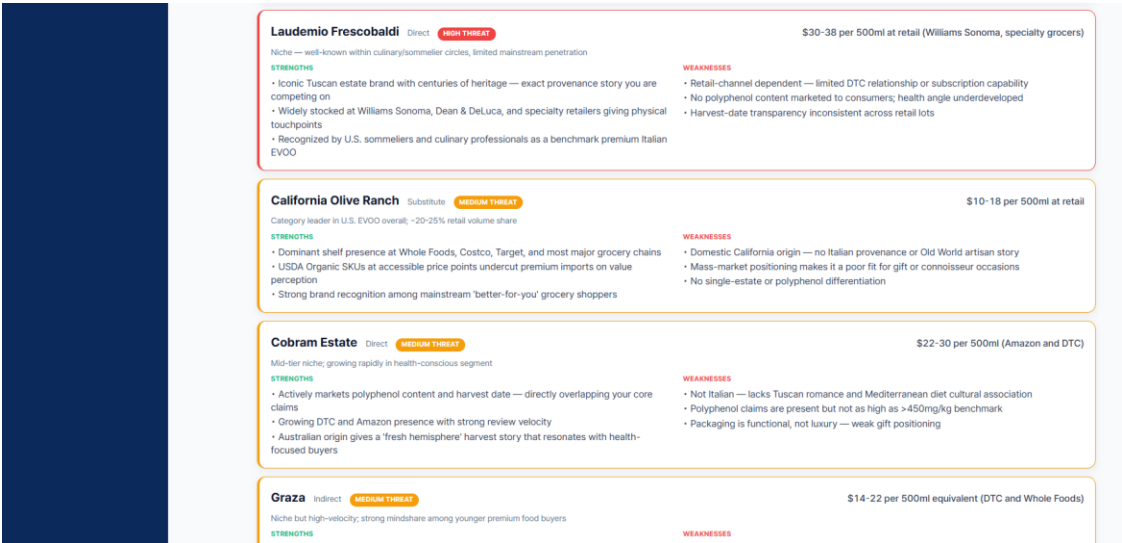

Results — positive/negative persona voices

6.2 Market Analysis Tab

Market size for the recommended country (TAM estimate, growth trend, reachable segment, with source links) plus **competitor analysis**. Each competitor is compared on threat level (high/medium/low), origin, overview, strengths, weaknesses, and price.

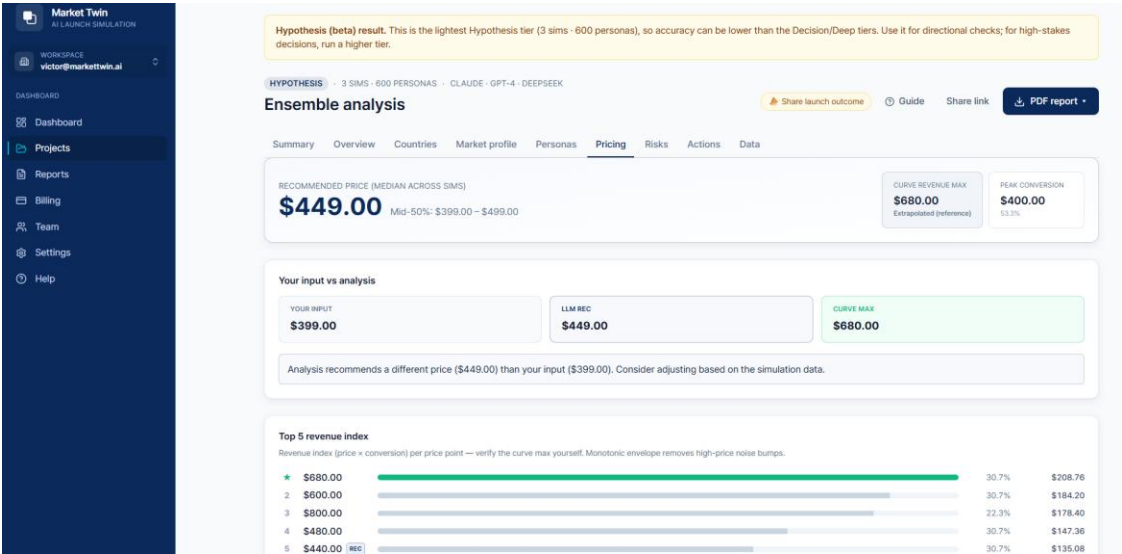

Results — market size & competitor analysis

Results — competitor detail comparison

6.3 Pricing Tab

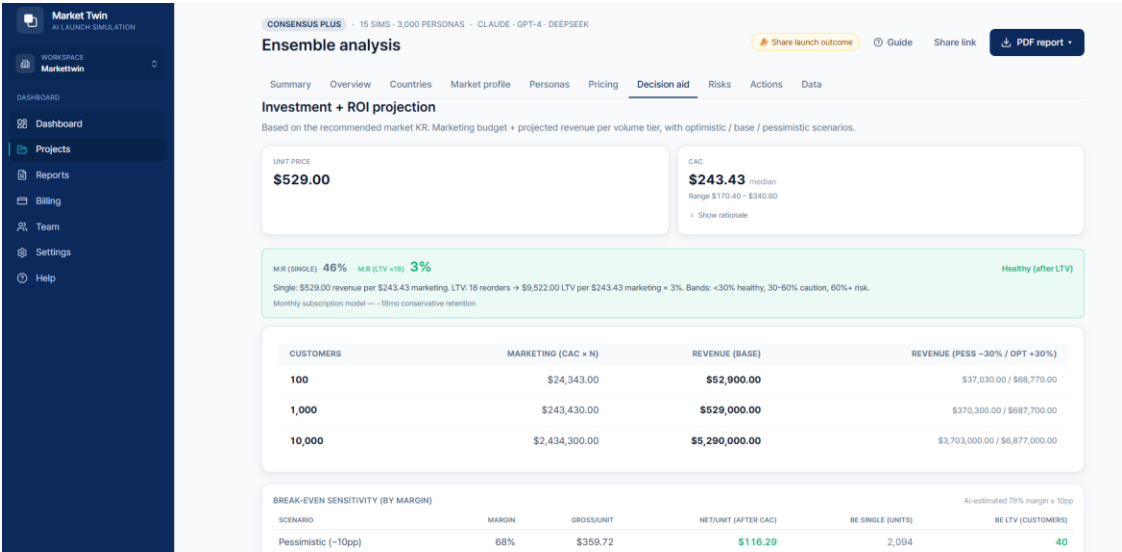

Recommended price (median across sims), the middle 50% band, a comparison of **your input vs. LLM recommendation vs. the curve’s revenue-maximizing point**, and a Top-5 revenue index (price × conversion) — validating the right price with data.

Results — price optimization

6.4 Decision Tab

Unit price, **CAC (customer acquisition cost)**, **M:R (marketing-to-revenue)**, marketing budget and expected revenue by customer count, and **break-even scenarios** — supporting your investment decision.

Results — investment required + ROI

6.5 Risk Tab

The overall risk level plus individual risks (HIGH/MEDIUM) with descriptions, the number of sims that surfaced them, and consensus rate. Identify, in priority order, the barriers to clear before launch.

Ensemble analysis

Summary Overview Countries Market profile Personas Pricing Decision aid **Risks** Actions Data

Overall risk level **HIGH**

HIGH DTC-only model structurally excludes the highest-intent trade buyers in US and GB, capping first-year revenue by an estimated 35-45%
In the US, the food expo trade buyer (intent 52), hotel F&B manager (intent flagged as needing B2B invoicing and net-30 terms), and café owner personas collectively represent the foodservice and specialty retail channels that drive volume for premium EVOO imports. In GB, the fine-food wholesaler category director explicitly states 'a DTC-only channel is a structural problem' and requires wholesale pricing, MOQs, and import documentation before any listing conversation. Without a wholesale or trade tier launched by Q3 2026, these segments — which account for an estimated 35-45% of addressable revenue in both markets — are entirely inaccessible. Affected markets: US, GB.
Surfaced in 14/15 sims **strong consensus (93%)**

HIGH Absence of a published third-party polyphenol lab certificate will block conversion among DE dietitian and health-professional personas and trigger credibility loss in GB
Four distinct DE personas (registered dietitian, school/hospital dietitian, health supplement subscriber, serious dieter) and one GB persona (NHS GP influencer with 85k followers) explicitly require a published Certificate of Analysis or third-party lab report before recommending or purchasing. The DE dietitian states: 'a brand claim alone does not meet my evidence standard for institutional recommendation'. Stiftung Warentest has previously exposed inflated EVOO polyphenol claims in the German market, making unverified brand claims actively counterproductive. Without a publicly accessible third-party COA on the product page at launch, estimated conversion rate among the DE health-professional segment drops by 60-70%, and the NHS GP influencer partnership — the highest-leverage GB acquisition channel — is unavailable. Affected markets: DE (primary), GB (secondary). Remediation: commission and publish a third-party polyphenol and acidity COA before any DE or GB campaign spend, targeting completion by August 2026.
Surfaced in 15/15 sims **strong consensus (100%)**

HIGH No US importer registration or FDA food facility registration in place — launch delay risk of 8-12 weeks if not initiated immediately
US food import requires FDA food facility registration for the Italian production site and Prior Notice filing for each shipment. If the Tuscan estate is not already registered, the registration process takes 4-8 weeks and must be completed before the first commercial shipment clears US Customs. A missed Q4 2026 holiday gifting window (estimated highest-revenue period for premium DTC food) due to customs clearance delays would cost an estimated 25-30% of first-year US revenue. Additionally, the

Results — risk analysis

6.6 Actions Tab

A priority matrix placing each action by **impact (vertical) × difficulty (horizontal)**. Start top-left with **Quick Wins** (high impact, easy), then review Strategic / Marginal / Avoid.

Ensemble analysis

Summary Overview Countries Market profile Personas Pricing Decision aid Risks **Actions** Data

- By June 2026: Initiate FDA food facility registration for the Tuscan estate and engage a licensed US customs broker to establish the import pathway — this is the critical-path item for any US commercial shipment and must be completed before Q4 2026 holiday inventory is shipped.
Recommended by 12/15 sims **Vague 25**
- By July 2026: Commission a third-party polyphenol, acidity (<0.3%), and pesticide residue Certificate of Analysis from an accredited EU or US laboratory (e.g. SGS, Eurofins). Publish the full COA as a downloadable PDF on the product page. This is a prerequisite for DE and GB health-professional influencer partnerships and for US trade buyer conversations.
Recommended by 15/15 sims **Partial 50**
- By July 2026: Engage a UK food import compliance consultant to produce a UK-specific label variant meeting UK Food Information Regulations 2014 requirements, including a UK importer address, UKCA-equivalent organic certification, and English-language allergen labeling. Target label approval by September 2026 to enable GB DTC launch in Q4 2026.
Recommended by 7/15 sims **Partial 50**
- By August 2026: Build and launch a US influencer gifting program. Identify 20-30 US food and Mediterranean diet creators in the 20k-200k follower range on Instagram and TikTok (prioritise creators with documented anti-inflammatory nutrition, Italian cuisine, or artisan ingredient sourcing content). Send gifted bottles with a personalised harvest-date card and a polyphenol comparison one-pager. Negotiate affiliate codes (10-15% commission) for creators with audiences above 50k. Target 15+ pieces of organic US content live before the DTC site launch.
Recommended by 15/15 sims **Concrete 75**
- By September 2026: Launch US DTC site at \$39.95 founding-customer price with a 90-day window, clearly communicated as a launch offer. Deploy Morning Ritual as the hero paid social creative on Instagram and Meta, targeting US zip codes in NYC, Portland, Austin, and Chicago with household income \$90k+ and interests in Italian cuisine, Mediterranean diet, and artisan food. Deploy Harvest Date Receipt as a secondary educational asset on Instagram Stories and TikTok.
Recommended by 15/15 sims **Partial 50**

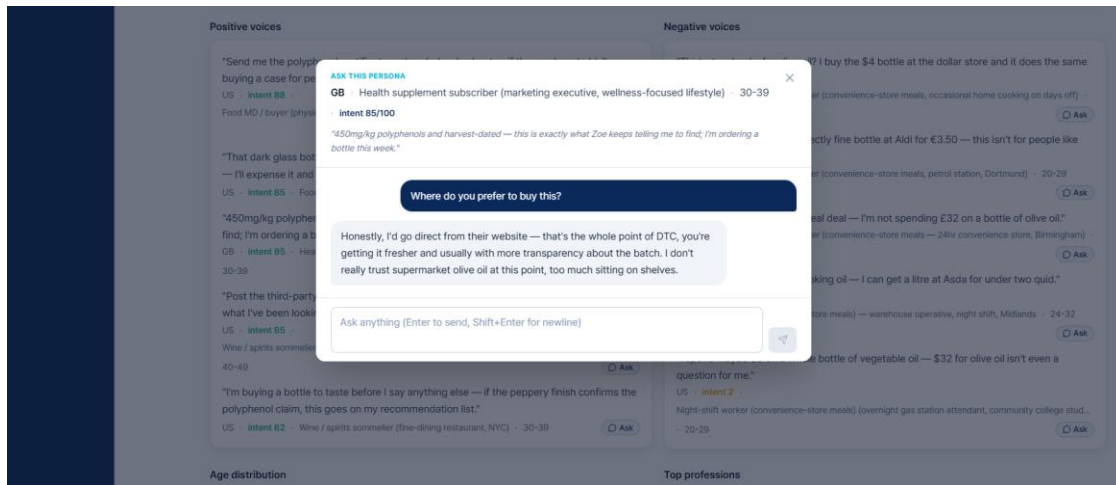

Results — recommended action priority matrix

6.7 Beta Feedback

At the bottom of the results screen, send feedback via *“Was this result useful for your decision?”* (1–5) plus a one-line comment. Your input goes straight into improving the product.

7. Asking a Persona

Click **“Ask”** on any persona card to ask that persona a natural-language question and get a first-person answer (e.g. “Which channel do you prefer to buy from?”). You can directly probe purchase motivation, channel preference, and objection reasons that quantitative stats alone can’t reveal.

Persona Q&A

8. PDF Reports

From **PDF Report** at the top right of the results screen, download three formats by purpose.

Type	Length	Use
Executive	2–3 pages	Hot take, recommended country, key actions, pricing (exec briefing)
Full analysis	~30 pages	Investment+ROI, recommendation robustness, intent by occupation, channel priority, risk × action
Cross-validation	McKinsey/BCG style	Consistency with external market data, confidence grade, staged execution

A report flows: consensus opinion → market situation + competitors → GTM strategy summary → 30/60/90-day execution timeline → per-country detail.

MARKET TWIN · Italian Premium Olive Oil DTC 500ml

May 7, 2026

Executive summary

Cross-sim consensus narrative from 15 runs.

GO on US as primary DTC launch market at \$49.95, with GB as a secondary test — but three high-severity blockers (DTC-only model excluding trade buyers, missing third-party polyphenol COA, and unconfirmed FDA facility registration) must be resolved before launch or first-year revenue and market access are materially at risk.

KEY FINDINGS

- United States leads consensus (100% / STRONG) — mean 71, std 1.1.
- Recommended price \$49.95 — all sims converged on \$49.95.
- 2,981 personas, mean intent 45% (high 399, low 833).
- Top risk: DTC-only model structurally excludes the highest-intent trade buyers in US and GB, capping first-year revenue by an estimated 35-45% (high, surfaced in 14).
- First action: By June 2026: Initiate FDA food facility registration for the Tuscan estate and engage a licensed US customs broker to establish the import pathway — this is the critical-path item for any US commercial shipment and must be completed before Q4 2026 holiday inventory is shipped.

PDF report — consensus opinion

GTM strategy summary

Key message, ICP, differentiators, and market-entry risks for US — direct input for campaign and landing design.

Key message

The only Tuscan single-estate EVOO with a published polyphenol count above 450mg/kg and a printed harvest date — because freshness and chemistry are not marketing claims, they are measurable facts. Where Brightland tells a story and Laudemio trades on heritage, we show the lab work.

Primary audience (ICP)

Culinary enthusiasts and health-conscious home cooks, 32-55, household income \$90K+, who already buy at Whole Foods, follow food Substacks or NYT Cooking, have purchased a premium DTC food brand in the last 12 months (Brightland, Graza, Diaspora Co.), and treat ingredient sourcing as an expression of personal values. Secondary: corporate and personal gift-givers seeking a \$50-75 premium food gift with a legible story. They hang out on Instagram, Reddit (r/cooking, r/oliveoil), Substack food newsletters, and YouTube cooking channels.

Differentiators

- ✓ Polyphenol content >450mg/kg with published lab certificate — Brightland does not publish polyphenol data; Cobram publishes lower numbers; this is a concrete, verifiable claim that no major U.S. DTC competitor currently owns at this level
- ✓ Harvest-date printed on bottle from a named Tuscan estate — Laudemio has the Tuscan heritage but inconsistent harvest-date transparency at retail; this brand can own 'freshness traceability' as a category wedge

✓ USDA Organic + EU Organic dual certification with named Italian certifier — California Olive Ranch has

10. Frequently Asked Questions (FAQ)

Q. How long do results take? The sample demo takes 2–3 minutes; a real product validation usually 5-6 minutes. Results are kept even if you close the screen.

Q. What's free? During the beta, 7 days or 2 hypothesis validations are free, with no credit card. The sample demo is available 3 times a day separately.

Q. Does the sample demo count against my free runs? No. The sample demo is separate from your free validation runs.

Q. Is my product information safe? For simulation inference, it is sent to overseas LLM providers, per the cross-border transfer notice you agreed to at sign-up. Payment card details are not stored (tokenized by the PG).

Q. Can I share results with my team? Yes. Share via the results-screen link, or invite teammates to your workspace and collaborate by role (owner/admin/analyst/viewer).

11. Troubleshooting

Symptom	Action
Verification email not arriving	Check spam → “Resend confirmation email” (60s interval) → still nothing, contact contact@markettwin.ai
Can’t log in	Check your sign-up method (Google/email) and whether email verification is complete
Simulation seems stuck	It keeps running in the background even if you close the screen. Check the results page shortly.
Results look off	Check you didn’t put external facts (sales/share) in the description (see §4.1 caution)
Recommendation skews to one country	Check the description/inputs for phrasing that implies a specific country

12. Glossary

Term	Meaning
Launch success score	0–100 composite based on demand, CAC, competitive intensity
Persona	A virtual local consumer generated from government statistics
Purchase intent	A persona's intent-to-buy score (0–100)
Ensemble	Running multiple independent simulations in parallel to raise reliability
TAM	Total Addressable Market
CAC	Customer Acquisition Cost
M:R	Marketing-to-Revenue ratio
LTV	Life-Time Value
BREAK-EVEN	Break-even point
GTM	Go-To-Market strategy
Hypothesis	The base analysis tier offered in the free trial
